

DevOps for Mid-sized businesses (MSB's)

Half-day workshop

Technologically advanced organisations began adopting practices to combine software development and IT operations in the early twenty tens. As a result, many early adopters of DevOps have dramatically shortened their delivery life-cycle.

In this workshop, we examine cross-functional modes of working, toolchains, and other proven patterns of success exploited by the organisations with the mature approach to DevOps in Codification's portfolio.

This is an interactive workshop where participants share their own organisational challenges, and in return, we share what good looks like when it comes to tooling, platforms and automation techniques.

Topics covered

- DevOps in a nutshell
- How does DevOps apply to my business?
- Tools
- Techniques
- Assessing readiness and maturity

2020 workshops

Infrastructure as code | Cloud Native security
Foundational Kubernetes | K8S practitioner
DevOps for SMEs | Monoliths to Microservices
Hybrid Cloud op models | Hybrid Azure implementations
